Journal-Based Assignments, Library Research, Field Research.

Abstract

Lecturers should be able to see their profession as a calling from the soul, so that they carry out their duties which are summarized in the tridharma of higher education. On the other hand, lecturers must be able to develop the talents of their students if they look talented and instill skills in their students if the skills are not visible. For this reason, STAI lecturer Rakha Amuntai began to improve by making all his student assignments more qualified by increasing the standard of assignments that were initially only papers based on published literature research, especially if there were students who were ready to make field research-based articles into published articles.

INTRODUCTION

Lectures are considered an activity to gain knowledge, he said. Starting from new students to those who are already in danger of dropping out, everything has spilled into one to fill the campus. Not only for lectures, there are also those who are just looking for free wifi, meeting supervisors or just sitting since their eyes are open in this world, there is not a single human being who has not experienced the learning process. No exception for a new baby born into this world, even the sound of a baby's cry can be said to be a learning process. Learning can be interpreted as a daily process in the life of an individual. So it is natural that there is a hadith that reads "Seek knowledge (learn) from a mother's cradle to the grave" which in the world of education today is better known as long life education or lifelong education (Ainurahman, 2012).

METHODS

The approach used is a qualitative approach, namely research whose data is in the form of sentences derived from interviews, report notes, documents, and research that prioritizes descriptions (interpretations) in an analytical manner. The qualitative approach was chosen because it is able to describe the meaning of events in detail and makes it easier to identify the type of information in describing phenomena. The type of research selected is a case study. This is so that all phenomena in the field are revealed in a real and accurate manner as the findings during the researcher go directly to the research location.

RESULTS AND DISCUSSIONS

Students as people who are in the process of gaining knowledge or studying and registered are undergoing education at one form of higher education consisting of academics, polytechnics, high schools, institutes and universities. A student is someone who is in the process of gaining knowledge or studying and enrolled in one form of higher education consisting of academics, polytechnics, high schools, institutes and universities.

The role and function of students even though the task of students is to study, but still, students should not be ignored by the conditions that occur in society. Students must try to identify problems that exist in society and try to solve these problems with the knowledge of the results of what they have learned so far, for example when there is a fact that there are still many people in society who litter, then students must jump in to find out the root cause of the problem. The problem is then trying to provide a solution, for example collaborating with local officials to build a waste management center and teach how to manage it, also educating residents so that they can regulate how to dispose of their household waste so that the environment becomes cleaner.

The task that most lecturers give to their students is a paper. This paper contains a specific topic or problem which is then analyzed based on research results and using library references, such as books, journals, and articles.

After the article is finished, the next student's task is to present it. Presentation is a type of coursework that requires students to speak in public, both in class and in seminars and forums. In their presentations, students discuss a topic or problem and express their opinions accompanied by a question and answer session. Presentations really help students to increase their courage and ability in public speaking and master the question and answer session.

The toughest task related to scientific work that usually occurs at STAI Rakha Amuntai is a thesis. Thesis is a final project that determines graduation to get a degree. Actually, the thesis is almost the same as the paper, it's just that the thesis requires more in-depth research and the methodology used is more complex and usually the thesis can take up to 1 semester or more.

So far, all of these things have been carried out, but upon closer examination, it turns out that each one of these activities only has the value of implementing only one field of the higher education tridharma. Starting this year, several lecturers began to think about how to make student paper assignments considered part of the teaching of the tridharma of higher education, also valuable as research from the tridharma of higher education, even collaboration between lecturers and students in implementing the tridharma of higher education and it turned out to be one of the A lecturer named Syahrani thinks that one more plus point should be added, namely that he must be able to raise the "h-index and i10-index" of lecturers' performance on Google Scholar, Sinta's account and Scopus account.

Because then there is a minimum standard of student assignments which of course must be assisted and guided by lecturers, doesn't STAI Rakha already have academic supervisors for all students, (Rahmatullah, AS, et al., 2022) because student assignments published via the internet are certainly more credible and Accountability must be based on or published via the internet (online), (Syahrani, S. 2021) data that is always internet-based is currently considered a modern institution (Syahrani, S. 2022) is considered more advanced in terms of management (Syahrani, S. 2022) because organizations with this model look more ready to face the times (Syahrani, S. 2022) and are considered ready to compete with the outside world, (Shaleha, Radhia, and Auladina Salihah, 2021) because they are accustomed and adaptive to information technology that continues to develop, (Syahrani, S. 2018) especially in the Koran, there are actually many verses that talk about this, so that Islam is not left behind in various ways, especially in terms of education (Syahrani, S. 2019) of course there are many strategies that must be carried out in order to be able to master the latest technology in terms of developing coursework, (Chollisni, A., 2022) no matter how great a school, without adapting to the times, it still feels like something is lacking (Syahrani, S., et al., 2020) especially now that there are many quality universities and advanced technology in providing journal-based assignments (Syahrani, S. 2018) if these two things are fulfilled, it is certainly easier to promote higher education, (Syahrani, S. 2017) it is hoped that the course of a school will be more ideal according to dreams, (Syahrani, S. 2017) although there are still many weaknesses, they must always be addressed (Syahrani, S. 2017).

At certain local colleges who are still considered new students, Mr. Syahrani gives assignments in the form of literature research-based papers which are sought to be published in journals. Library research or often also called literature study is a series of activities related to the methods of collecting library data, reading and taking notes and processing research materials. Literature research is not only an activity of reading and recording the data that has been collected. Characterization of digital databases needs to be done, in order to make it easier for academics to identify scientific literature correctly and

efficiently. This literature review intends to provide a characterization and description of research trends, methods, and coverage fields studied in research related to digital databases of scientific literature. The systematic literature review method was applied in this study to analyze and identify previous studies related to this topic. Based on the selected primary literature, it is known that there is an increasing trend of studies related to the digital database of scientific literature specifically for new students at STAI Rakha Amuntai which was fostered by Mr. Syahrani.

New students are given research assignments based on library research, this aims to strengthen the theory, then students are asked to review and compile their literature research articles which are then guided and directed to send them to journal publishers that are relevant to the title appointed.

Especially for senior students, their assignments are based on field research, so the statistics course taught by Mr. Syahrani must use the formula to become a description of the results of field research, which is then guided and directed to send it to journal publishers that are relevant to the title appointed.

CONCLUSION

STAI Rakha Amuntai students have always been given the task of writing papers and this is almost applied by all lecturers, the papers are then presented. Starting from the even semester of 2022, some extra work lecturers, so that initially they are only valuable as papers, must be increased to the implementation of all aspects of the tri dharma of higher education.

The trick is that new students must write papers based on library research and senior students must write papers based on data or based on field research. All of these works are guided by the subject lecturers to be sent to the journal manager relevant to the title appointed.
